

VENAPP Mafia: Technology used by Nicolás Maduro to persecute and oppress the Venezuelan people

Complete exhibition in a few days by Cyber Hunters Brazil

☒@azaelx64

Home of a Maduro opponent marked with an X

A Jew's store marked with Jewish symbol in Nazism

Technology brings opportunities for people to communicate and naturally carry out their human activities more efficiently and increases the development of society, but evil governments are using technology in a more efficient way against the population, as the dispersed population is unable to make large investments, the government does.

To hinder the process of society's evolution, the government takes resources from the people and creates tools to oppress the people themselves, who, through dictatorial laws and unscrupulous bodies, massacre the people who can do nothing.

At the center of this discussion we find government applications for credits and social points, as it is possible to alienate part of the population to monitor another part of the population, and to collect information the government can use technology to do so. Without the technology for a neighbor to report another neighbor, he must travel to a physical government post and then report something against his neighbor that will be used for the government to repress him. With technology, all you need to do is open an APP and report it.

But what would be so serious that the government would view this as a crime? **Maybe the simple fact of being against the government.** And what does the whistleblower neighbor gain? **Some reward, perhaps a social point, discounts, or even a little legal help with something you really owe to others.** I am not able to define the extent of the evil that the government can carry out nor how its chain of illegal actions can help or harm people, since I do not have the experience of being a ruler and only being a ruler to really reveal what it is to be evil and how to cause harm to the population.

But this is not new, let's look at the Chinese credit system[1], which has been in force in China since 2014 and is used to reward or punish a citizen. In the case of China, it is public and open that this credit is used to issue credit, but being a communist and dictatorial country, this credit is the only way to survive, we cannot see the word credit with the same meaning in a communist country and a capitalist country.¹. See, there are countries that are observing the actions of the Chinese government and implementing them even in capitalist systems[2], of course adapting the model.

But this credit scheme is not new, it was also used by the Soviet Union[3], but it is logical without technology, and has proven to be an important weapon against those who fight for the freedom of their country or disagree with governments. The application of the TELESCREEN described by George Orwell has never been so real, and that is scary.

1 VenApp a Venezuelan social credit application

Cell phones have great value for governments, since without a cell phone a human being can achieve close to social anonymity, but with a cell phone this is impossible. Using a cell phone, it is possible to obtain an individual's personal files, know where they go, what they like to do, their habits and even what they say. Although files on a Google Drive or Google Photos are end-to-end encrypted, the government has control of their end, its reference is that of the person, so it can know what is done with photos and documents. With the use of GPS, the government can know all your paths, where you go, and this is important as it will know what you consume and, if possible, where to kidnap you. We always talk to people, for example via WhatsApp, although end-to-end encryption, having a keylogger at one end, does not give you encryption.

But how could the government gain control of your cell phone? The first and illogical option is the use of malware, such as Pegasus, however the difficulties with these applications are that there is a high cost to control a mass, that is, a population. If there is one thing that the Chinese government has achieved in its social and human laboratory, it is: How to control a mass of people.

Another possibility is through large telephone companies, and the bargain would be through concession. every country needs to release the concession to companies, and without the concession the company cannot operate in an area, this option is cheap unlike malware like Pegasus, but it would be very expensive and it would be possible to collect evidence against it. Perhaps, although rare, a reporter from a news company would want to talk about this with such clear evidence in hand, but remember that classic media companies need concessions.

Finally, what if the citizen himself installed the application? To do this, it is important to give him some benefit at first and then transform it into an obligation. The first step as a benefit, a scoring scheme so that with this score it is possible to have more access to health resources, whether through shorter queues or even more expensive medical treatment. And as ridiculous as it may seem, in Venezuela's VenApp, discounts are given on product purchases, perhaps due to the fragility of the economy that makes it impossible to run a

¹Capitalism vs Communism was used here just to remind the reader who lives in a capitalist country that credit has a different context;

market free from government intervention.

But other governments have already gone to the other extreme, such as the Brazilian government, which associated several social services with government applications, for example, every renewal of a car document or license today goes through systems like this, forcing citizens to install applications on their cell phones. government. **Remember that nothing the government does is for the people themselves, they always think about the government itself before thinking about the people.**

The Venezuelan government uses this option, a cell phone application, in December 2022 Venezuela's own Nicolas Maduro officially launched an application to blackmail the people who, already massacred by a chaotic economy and a weakened social system, find themselves subjugated to application, either use it, or die of hunger and we know that it is less painful to die from a bullet than to die from hunger. The application is called VenApp, and it was sold to citizens as a way to complain about the government itself, about the wrong things that are happening, especially failures in public services. In exchange, there are numerous items that a Venezuelan can purchase at a lower price than in the normal market, that is, buy sneakers, clothes and other electronic items at a discount, and for this the Venezuelan only needs one thing, install and use the application .

Second Nicolás Maduro, **"this is the most important tool for advancing the Bolivarian revolution in communities"**. Analyzing a speech by Nicolás Maduro in the official announcement made on May 23, 2022[6] and with thunderous applause the reverse intention of an application for its plan is observed **1x10 of good government**. Minutes before the announcement of the VenApp application, Nicolás Maduro explains attempts at social disturbance, well, his concern is clear.

Which citizen would criticize a solution that the president of his country himself states on television that VenApp is an application that will give a direct voice to the people and that the people will have direct contact with the president? Who would object or not use it?

According to government propaganda[4][5] it is an intuitive and easy-to-install application, which is available in the Android App Store for Android and Apple App Store for iPhone, as per **Figure 1**. As the government itself knows that in the future (if you look at 2022) the application may be removed from the Android and iPhone store, they already inform that it can also be obtained directly from the official Venapp website.

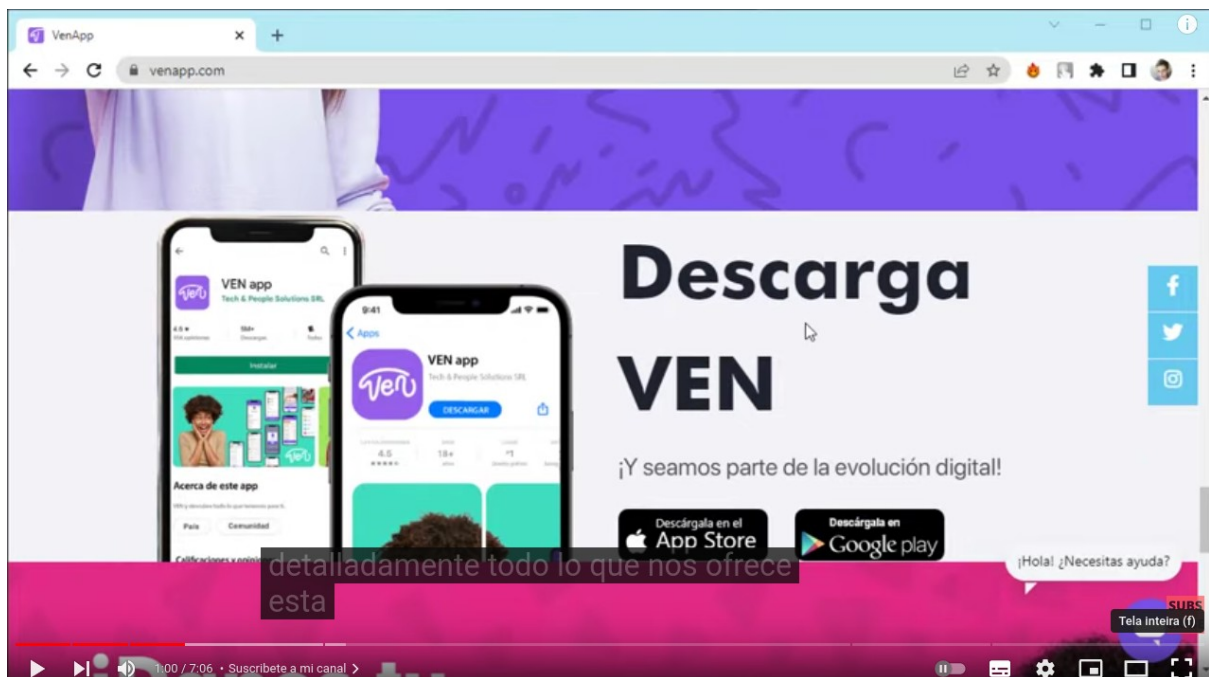

Figure 1 - A web interface showing where to find the App

This application, among other features, is:

- Government information channels for the people;
- Chat for people to talk to people, similar to WhatsApp;
- One line (line 58) to send complaints to the government;
- A channel for sending ideas to the government;
- Discounts for events;
- Discount for purchases;
- Cell phone recharge;

The 2023 propaganda claims that it is a quick way to get a response from the government, and in fact in 2024 it is discovered that it is, with complaints made it was possible to identify where people who do not agree with Nicolás Maduro's government live, in such a way agile like the way the Nazis identified Jews for their concentration camps.

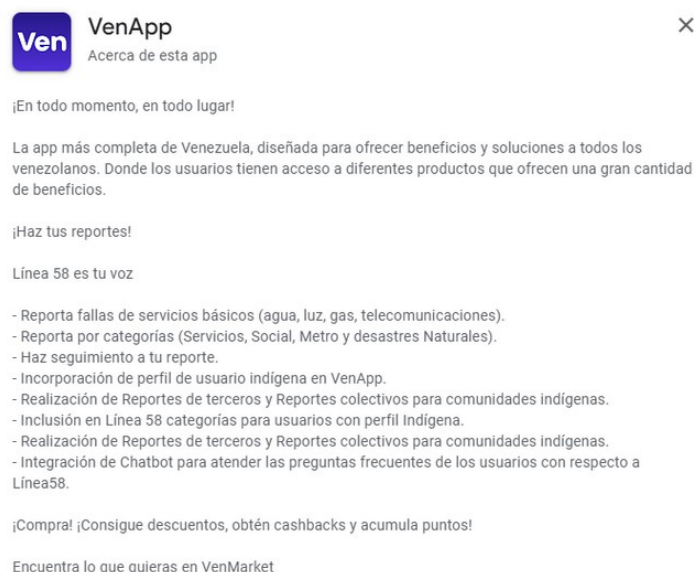

Figure 7 Application features of the VenApp application

What scares the most is a module called Line 58, which anyone can send a message to the government, including photos, you can take photos and send them with a text, which we will expand on. Always in every government, and no matter the spectrum, we will have alienated people (see Figure 12), people who believe that their government is good and that others are bad, they do not see that every government is bad and that is why they are alienated. These alienated people are ready to denounce everyone who thinks differently, everyone who disagrees and worse, everyone who criticizes, given that one of the foundations of the state is to understand the population's criticism. So yes, there are people who have used this app to do harm to other people.

Figure 12 An alienated person[14] by the state asking Nicolás Maduro to change VenApp for complaints

We have to understand that due to the events in Egypt, the United States and Brazil, social networks have become a great villain in the view of governments, and it is natural that the VenApp application was announced by President Nicolás Maduro as such a great social network application as well as the classic ones, Facebook, Twitter, Instagram, etc..

In reference [6], from Nicolás Maduro's own voice, is announced in the minute **20:00** that there is an application that will be used, it is called VenApp and that it is an initiative by Venezuelan women who had a unique and entrepreneurial vision, but I will demonstrate that this is not the case. In fact, it is an application distributed by a company specializing in national security for governments, including the North American government, and that is frightening, not the lie told by Nicolás Maduro, but rather the FRAMEWORK of evil sold by capitalist governments to communist governments. But why would Nicolás Maduro use the term women entrepreneurs? A call that raises the government's points in the eyes of society is the appeal to Wook terms, and this statement highlights that it is made by people from Venezuela and not by North Americans who are targets of criticism from Nicolás Maduro himself.

1.1 Data Privacy and Policy

Privacy policies[7] are harsh on the user, firstly they state that personal data will be shared with Teach and People S.R.L. and which will be protected by this organization, which will be discussed later. See what's in the privacy policy: "***We may collect people's contact information as well as other data in connection with our technology and mapping functions.***".

The worst is to come, as the privacy laws used by the application are subject to the laws of Panama and this guarantees that Nicolás Maduro can go against the laws of Venezuela itself as his infractions would not be punishable in Venezuela. A user of this system must be willing to:

- User profile;
- Demographics;
- User Content;
- Location data;
- Photographs or files;
- Usage data;
- Device data;
- We use cookies and similar tracking technologies to track activity on our Service;
- You can instruct your browser to reject all cookies or to indicate when a cookie is being sent;
- We may use third-party service providers to monitor and analyze the use of our service;
- VEN APP may use the collected data to market relevant information to users.

Such permissions allow you to obtain images and location data, if you stop and understand better, you will see that this is the most important information for a government. When Hitler carried out his **FINAL SOLUTION**[8], today known as the Jewish Holocaust, he knew where each Jew was, each one was mapped and each house or business was registered and American IBM helped, without IBM none of this would have happened and this may be happening again, not by IBM but another American company is involved in this new scheme that could be used in a final Venezuelan solution.

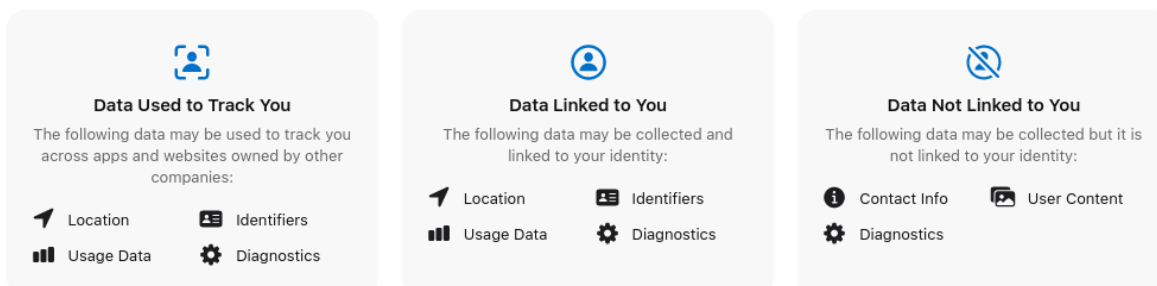

Location data with usage data can be used to profile escapees and who could help a

potential escape, as well as find an entire network of anti-government or anti-situation action. See on **Figure 4** which is informed that location data will be shared with the government of Nicolás Maduro.

App Privacy

[See Details](#)

The developer, CYBER CAPITAL PARTNERS CORP., indicated that the app's privacy practices may include handling of data as described below. For more information, see the [developer's privacy policy](#).

Privacy practices may vary based on, for example, the features you use or your age. [Learn More](#)

Figure 4 The Apple App Store states that location data will be shared

1.2 Companies involved

We currently have three companies directly involved, these are:

- Tech and People SRL (**will be referred to as TPS**);
- Cyber Capital Partners Corp (**will be referred to as CCP**);
- Mayor's Office of the National District (**will be referred to as DNA**).

According to the discussion[9] on the FOROND.COM forum the application **VenApp** initially distributed by **TPS** (see Figure 2) and later appeared as being supplied by **CCP** (see Figure 3), both external companies from Venezuela and going against what was said by Nicolás Maduro in **[6 minutes 20:00]**, referenced the development and implementation of the efforts of Venezuelan women entrepreneurs.

Figure 2 Similar system from TP company for the people of Panama

It is not a solution that is on Venezuelan soil and therefore relies on the jurisdiction of other countries, think, **If this is so, how can Nicolás Maduro be directly attacked?** If the

servers are in another country, an attack is not directly on Venezuela and involves several countries and an attack on another country is not a direct attack on the Venezuelan dictatorship.

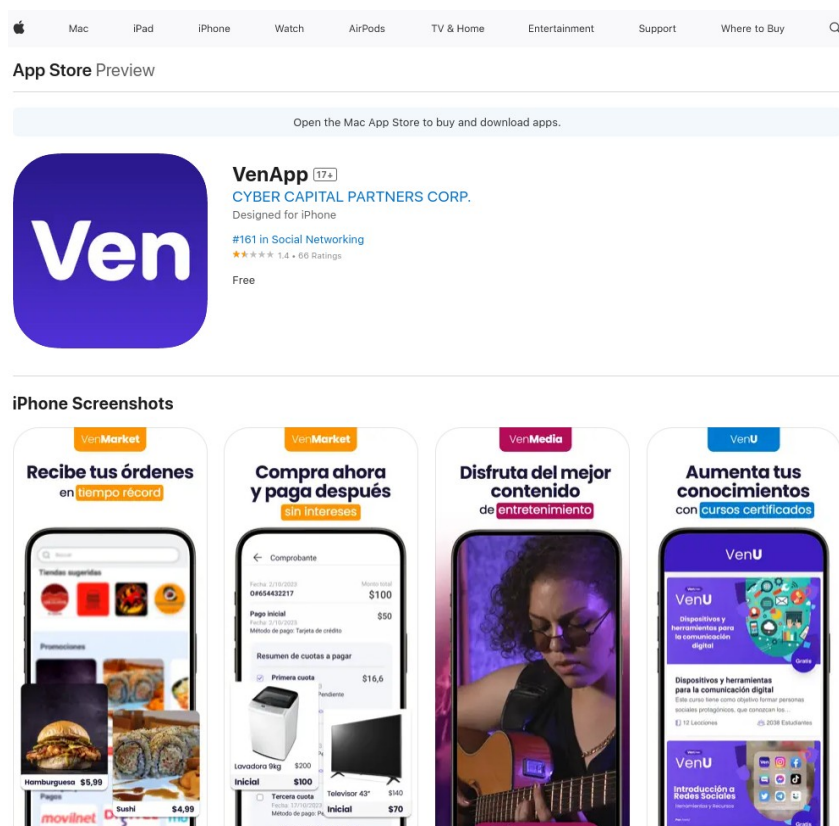

Figure 3 Company data Cyber Capital Partners Corp (CCP). no VenAPP na Apple APP Store

See (Figure 3) that the application information in the **Apple App Store** that connects the company **CCP** to the VenApp app.

Figure 5 Company data Cyber Capital Partners Corp (CCP). no VenAPP na Apple APP Store

And the worst part is that there are complaints, in the first week after the coup orchestrated by **Nicolas Maduro** both in **Apple App Store** as in **Google Android App Store**, the systems were there to be removed. It is possible to see people warning as **Figure 8**. It took a while but it was removed, later in this article I will demonstrate a strategy behind the

VenApp to distribute your nefarious application.

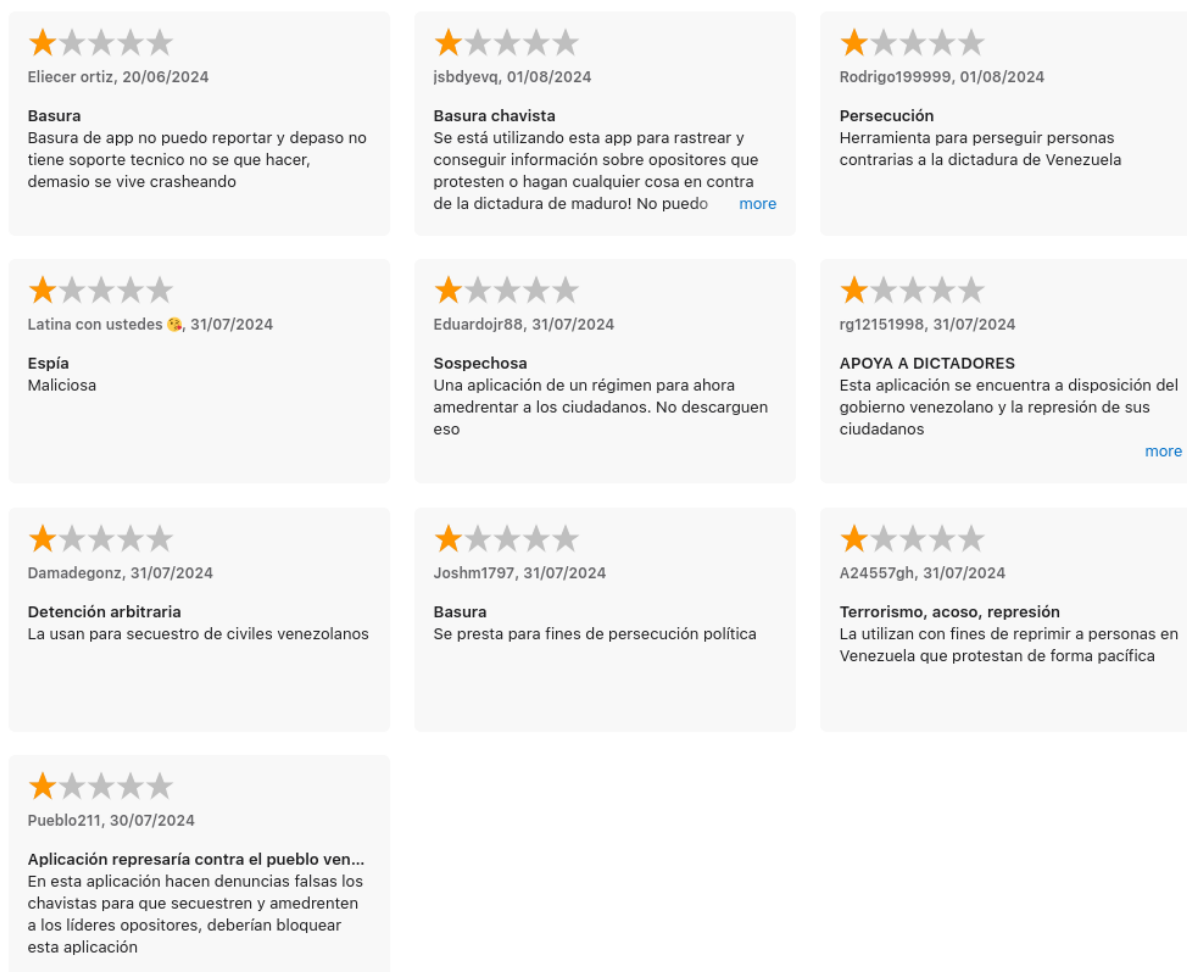

Figure 8 People warning platforms that it is an application that violates basic human rights

See the description in Figure 9, this application is associated with the project **1x10 of Good Government**, this association is due to **Line 58**. Although it showed VenApp's reference to the company **CCP**, it was only possible to confirm that there is also a relationship between VenApp and the company **TPS** through **archive.org** (see Figure 13), it seems that someone was already saving evidence for the future and it was possible to link the two companies to the same product.

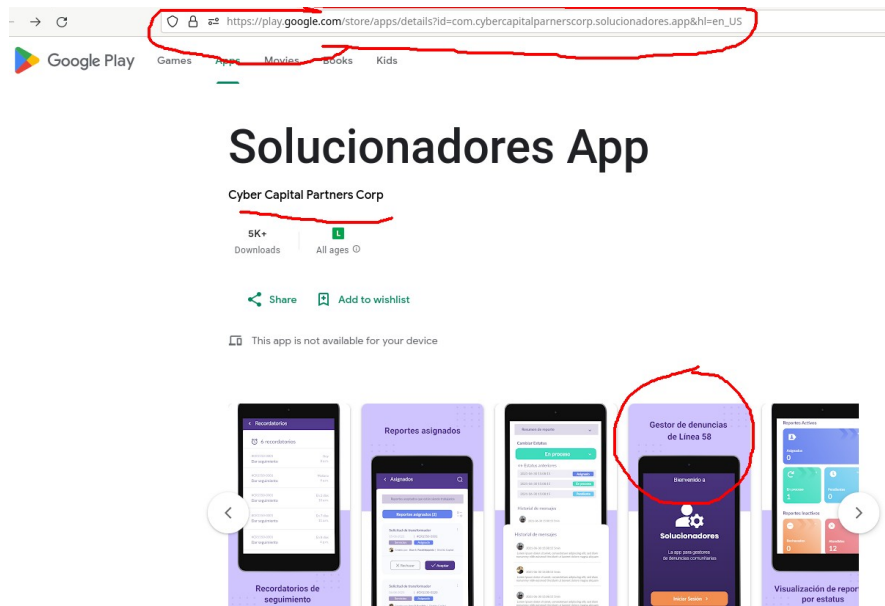

Figure 25 - Line 58² announced by Nicolás Maduro [6]

Below is an image obtained from archive.org.

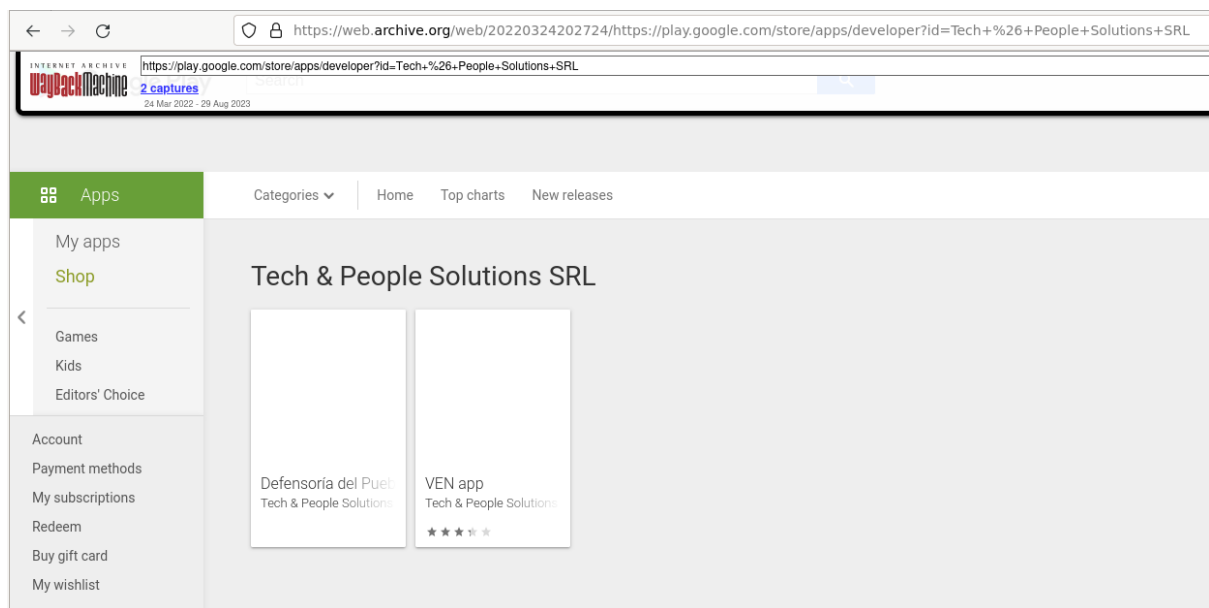

Figure 13 History of a page on archive.org

There is a large Framework to subjugate the people, a large corporation that develops flashy software but that actually spies on working people and can be used (and is being used in Venezuela) to locate and eliminate opponents. Let's take a look at the miSantoDomingo app[15] available at **Android App Store**. A third company appears and appears to be unrelated to Venezuela's VenApp, although the purpose is the same.

Figure 14 miSantoDomingo application on the Google Android App Store referenced to the company ADN

But looking at old references on the Internet, as well as tutorials and videos, we can clearly see that the company **Mayor of the National District** is another company, **TPS**.

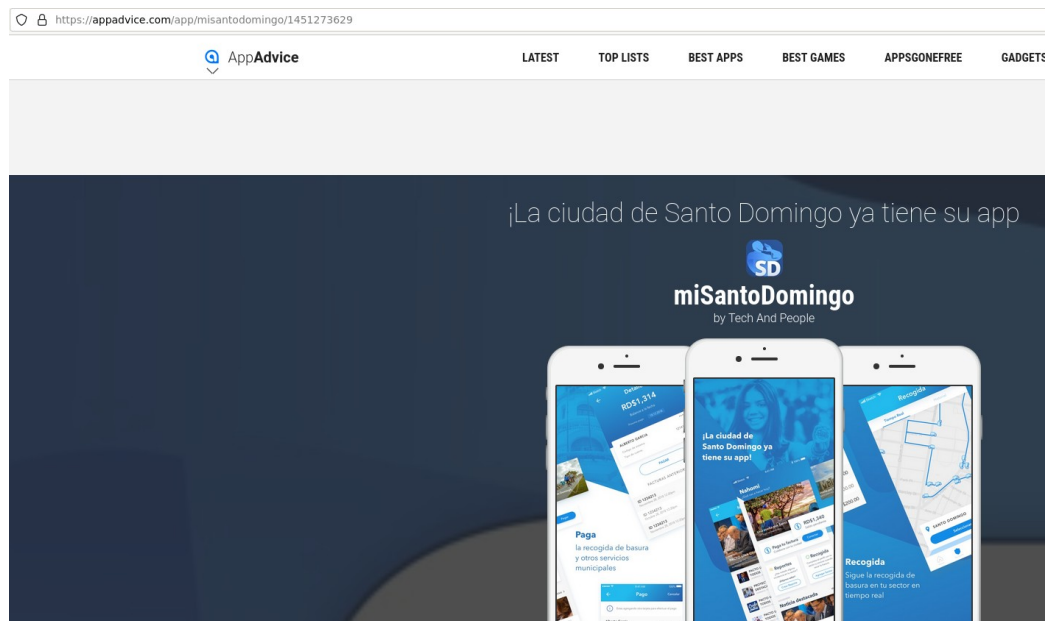

Figure 15 Announcement[17] from the miSantoDomingo app with reference to TP

According to reference [9] we have in Figures 16, 17, 18 and 19 details of the companies mentioned and others involved, such information requires investigation as it is obtained from Internet Forums.

Figure 19 CCP company data according to source [9]

Although I tried to change the name of the Android Application, due to the platform's bad reputation, all of its movements were recorded according to the AppBrain website.[20], see Figures 26 and 27.

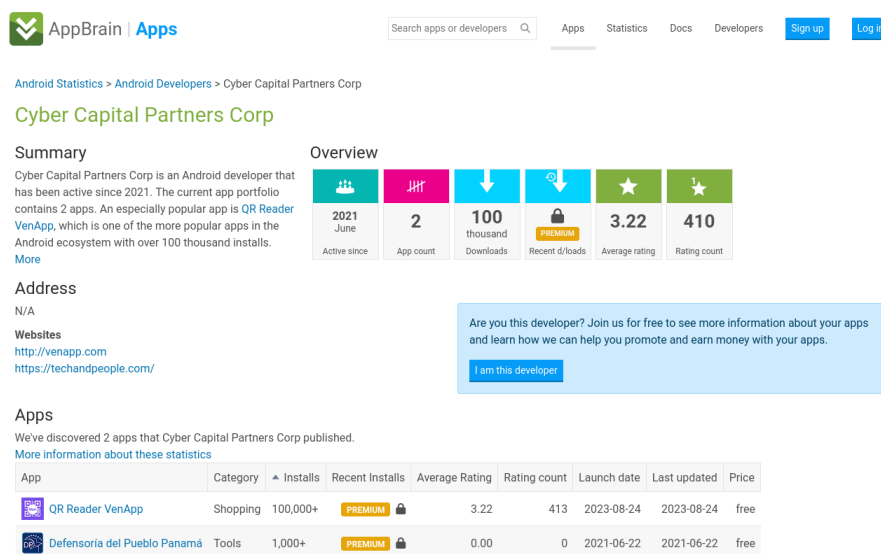

Figure 26 CCP mobile applications according to [20]

In Figure 27 we see that the application in August changes its name, knowing that the election in Venezuela was on the 28th of July, it is suspicious that this new application is actually the previous one.

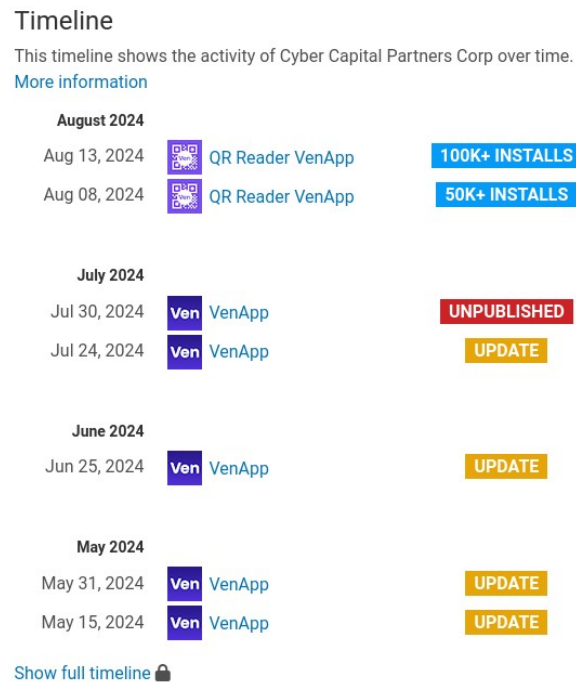

Figure 27 Application evolution history [20]

If you do a search for all these companies, you will see that they are directly or indirectly associated with two names, these are:

- Quijano & Asociados (from Panama);
- André Golabek Sanches;

One of these names is linked to the biggest global corruption scheme ever seen, and was fought in several countries, mainly in Latin America and the company that will be mentioned also has works in Africa, it is the **Odebrecht**.

Analyzing the name **Juan Alberto Alvarez Martinez**³ It can be said that information was located outside the scope but important for a broad context. In addition to being president of **CCP** is also president of **Brain Pbd Us, Corp**[18] (see Figure 20).

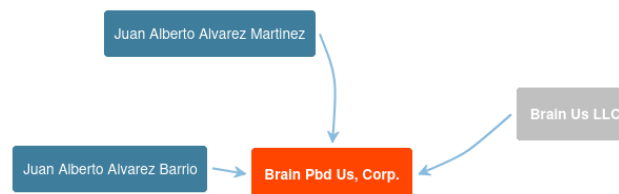

Figure 20 Relationship between Juan Alberto Alvarez Martinez

The first step is to go to the company's website and check if there is anything impressive, it is a company specialized in **analyze social networks** and is linked to **governments**, well,

³Juan Alberto Alvarez Martinez it's orange Andre Golabek Sanches.

anyone who has 2 neurons can associate.

Figure 21 Proof that the company photo is social network analysis

But this company does not have 15 years of experience, but **Andre Golabek Sanches** He reports on LinkedIn experience with data analysis since 2009 and in recent years he has been applying it to smart cities, or should we say, population control through coercion. The addresses located are:

- 1600 Ponce De Leon Blvd⁴, Fl 10 Coral Gables, FL 33134-4031 USA. See Figure 22.
- Torre Financial Park⁵, 7th Floor Office 7BD PANAMA;

The contacts to reach this company are:

- (305) 781-0719
- (507) 392-0756
- mercadeo@brainpbd.com
- info@brainpbd.com

Social network of this company:

Figure 18 Data from the company NOLATECH described by the source [9] as a participant

Address:

- F&F Tower - C. 50, Panamá, Provincia de Panamá, Pan

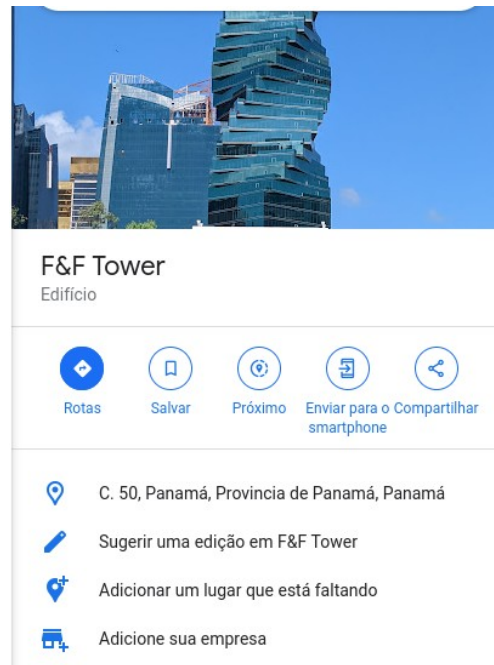

Figure 28 Andre's company location

What is interesting is that there are two companies nearby, a distance from NOVATEC and **Brain Pbd Us** is displayed on the map of 26.

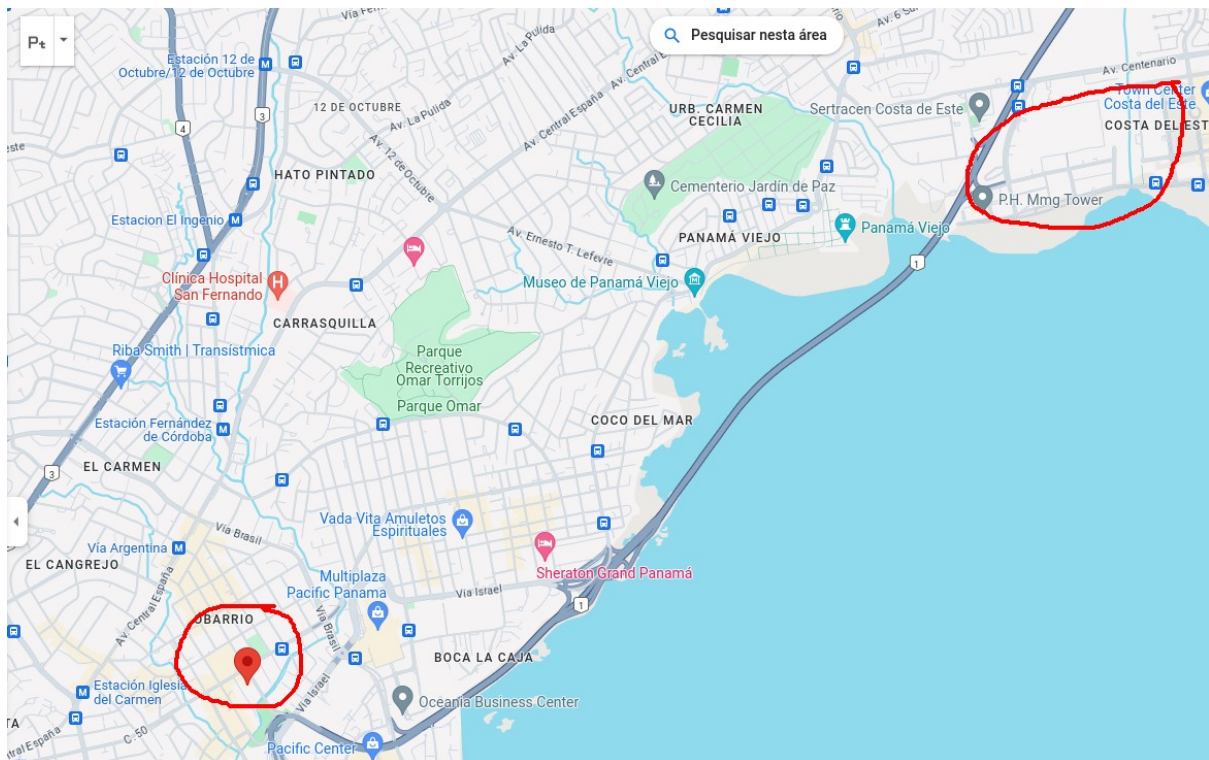

Figure 26 Two of Andre's companies on the Map

NOVATECH operates in three characteristics (see Figure 27) seen in VenApp and also provided by Brain, they are:

- Smart City;
- IoT;
- Cyber Intelligence Service.

This is an expertise created years ago to spy and provide services to governments.

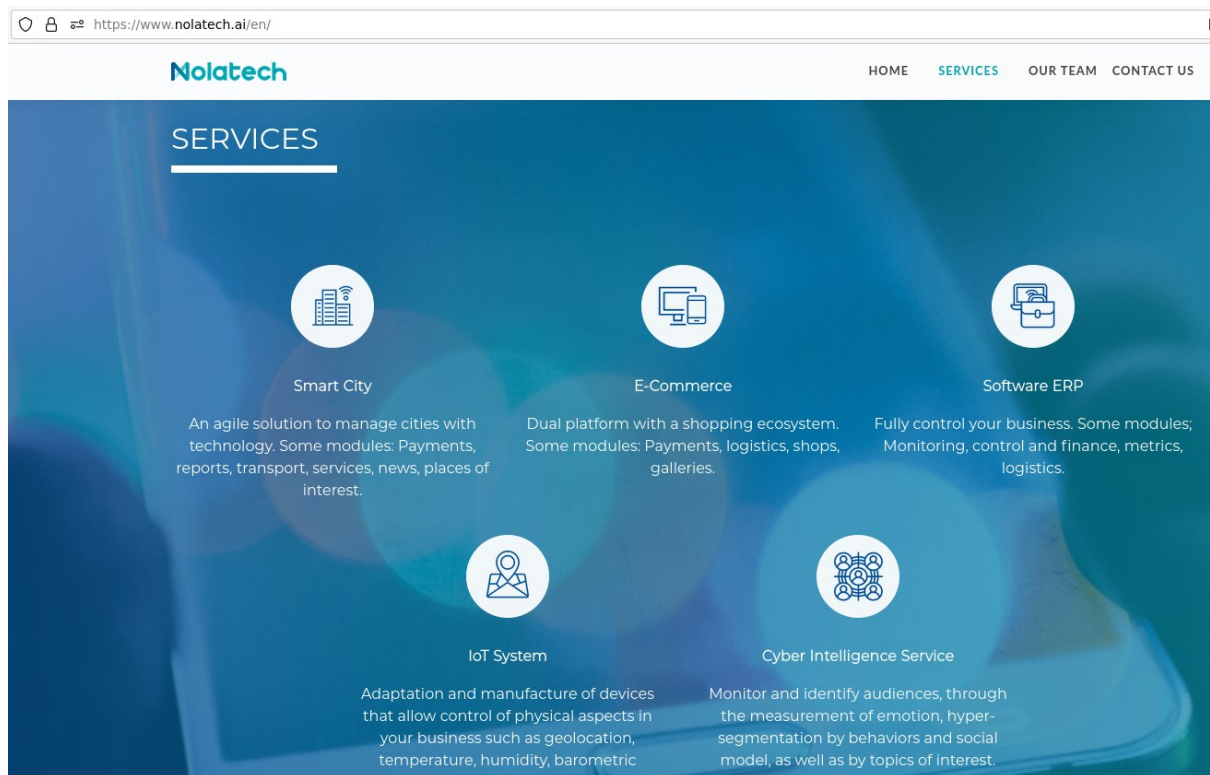

Figure 27 nolatech.ai homepage

According to reference [19] the questioned applications have a common IP (as of May 2023), which is 186.159.118.106. Looking for information about it, it appears that it comes from Panama (see Figures 28 and 29).

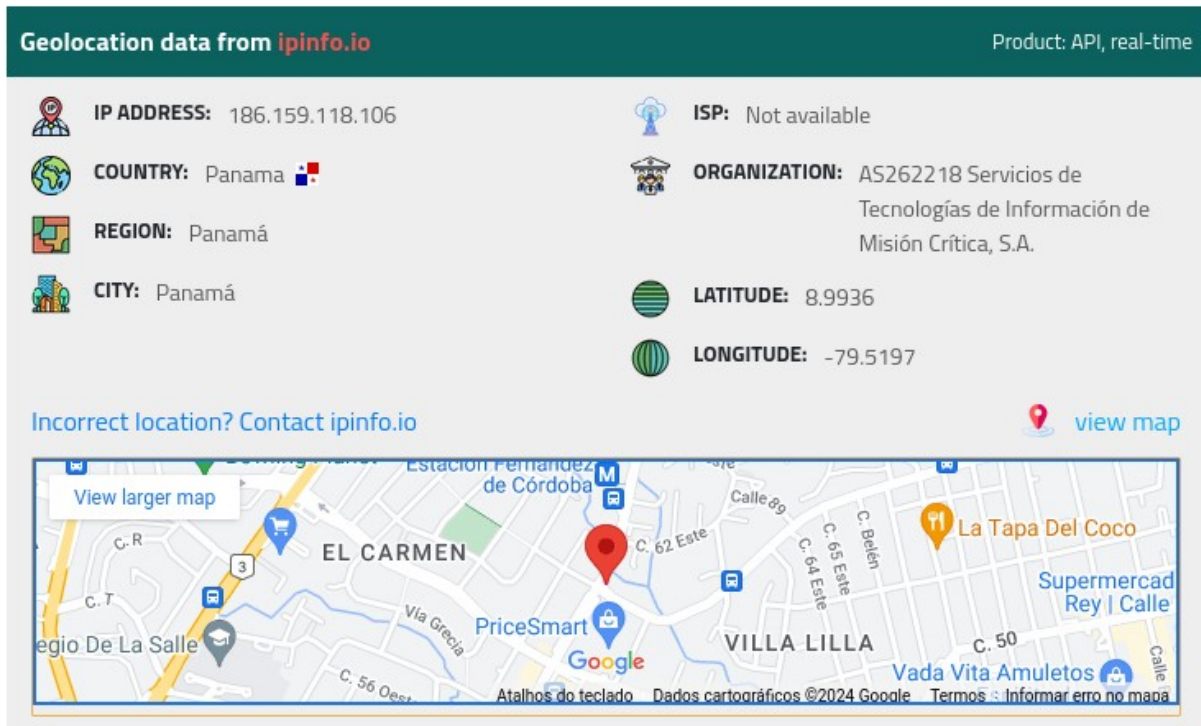

Figure 28 IP address related to VenAPP

What's strange is that this IP address is not far from two other addresses related to companies involved with VenApp.

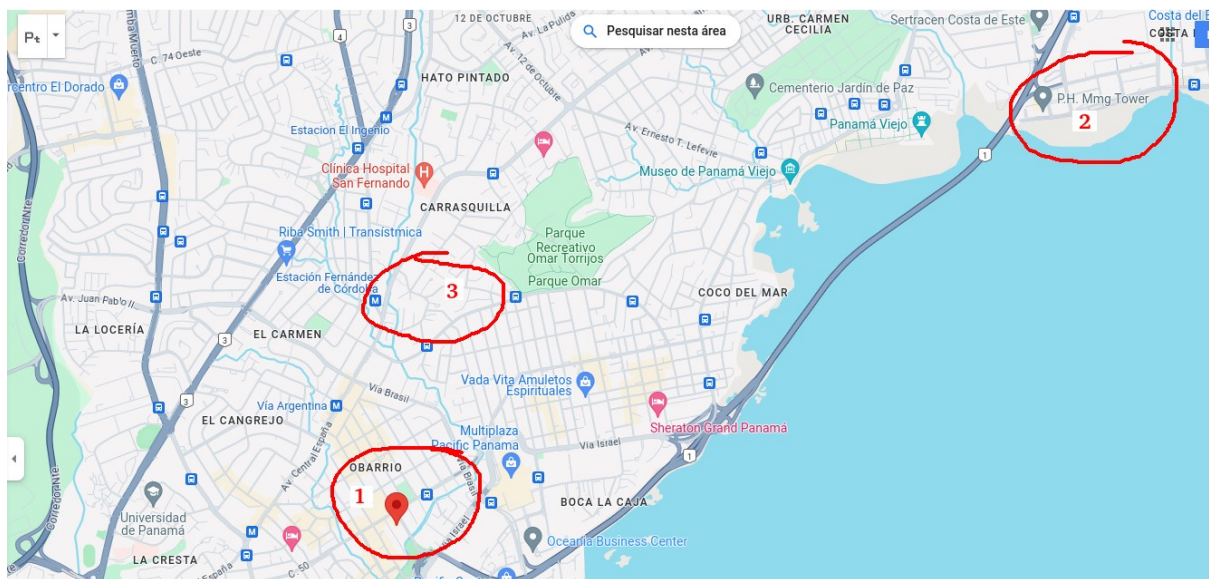

Figure 29 Locations related to VenApp (companies and IPs)

Using the **Street View do Google Maps**, you can see the building corresponding to VenApp's IP, and as strange as it may seem, that flag on the facade. Of course it seems to be a coincidence.

Figure 30 - Possible IP address obtained

1.3 Complaints against the application

Numerous people and bodies are denouncing the application, including the press itself^[13] who supports communism in Latin America. In response, both the Apple App Store and Google Android App Store removed the app after a few days, but it is still accessible as we will demonstrate in this article.

People directly confirmed Figures 8 and 9, while others, as we will see through the use of less controlled social networks, such as X.com.

¡En todo momento, en todo lugar!

Persecución

Herramienta para perseguir personas contrarias a la dictadura de Venezuela

Figure 9 Association of this application through the Linea 58 project

Figures 3, 5, 8 and 9 were obtained from the official Apple App Store page[10]. And the complaints don't stop, as previously stated, the VenApp application was originally made to report failures in public service, but evidence is beginning to arrive that the option to report what Nicolás Maduro calls fascists has been added, which in fact should be call opponents and we know that opposition is healthy for any society. See in Figure 10 a person who in his post[11] in addition to reporting it, he published a video[12] with full evidence of such actions by the Government.

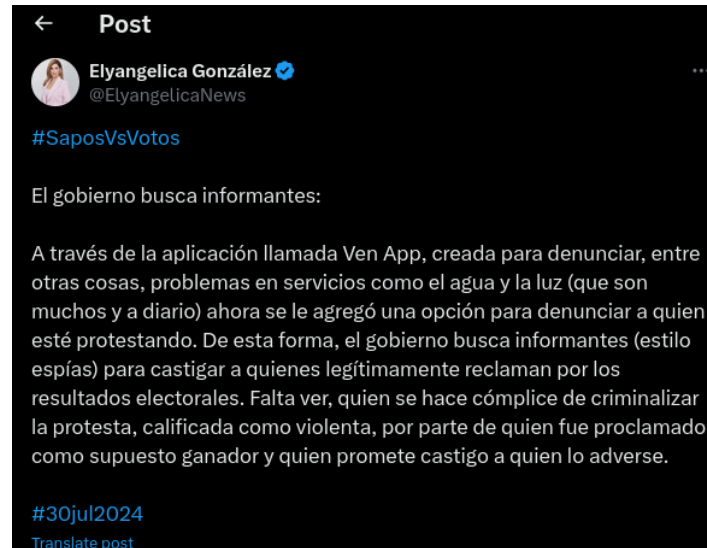

Figure 10 Post on Twitter by @Elyangelica González denouncing VenApp

In reference [11] you can find a video of the complainant that explicitly shows how the complaint is made, but of course, she is doing it to show how absurd it is. The government of Nicolás Maduro classifies opponents who fight for freedom as fascist as shown in Figure 11.

Figure 11 Application interface with the option to report fascists

The funny thing is that every communist government assumes that if there is any opposition, that opposition is automatically fascist, and the unnecessary and wrong use of it spoils even the accusation and the term, which perhaps becomes banal.

Figure 29 User complaint in X⁷

1.4 App e site venapp.com

The VenApp application, as previously demonstrated, was delisted from the platforms, the strategy adopted by administrators is direct distribution via the application's official website, but in addition to distributing the APK they also had to detail the manual installation process of the application. In 1 week⁸ the application changed twice, luckily I got the old version to analyze IPs and domains. See Figure 30 for the process.

⁷Accessible via URL: <https://x.com/cazamosfakenews/status/1818742864597467309>

⁸Retrieved August 2024;

Figure 30 VenApp installation process according to venapp.com

The domain venapp.com was registered by the company investigated at Godday.com and, for reasons of general data protection laws, it does not display information about the contractor. But from the whois (Figure 31) it is possible to see that it is an application hosted on cloudflare.

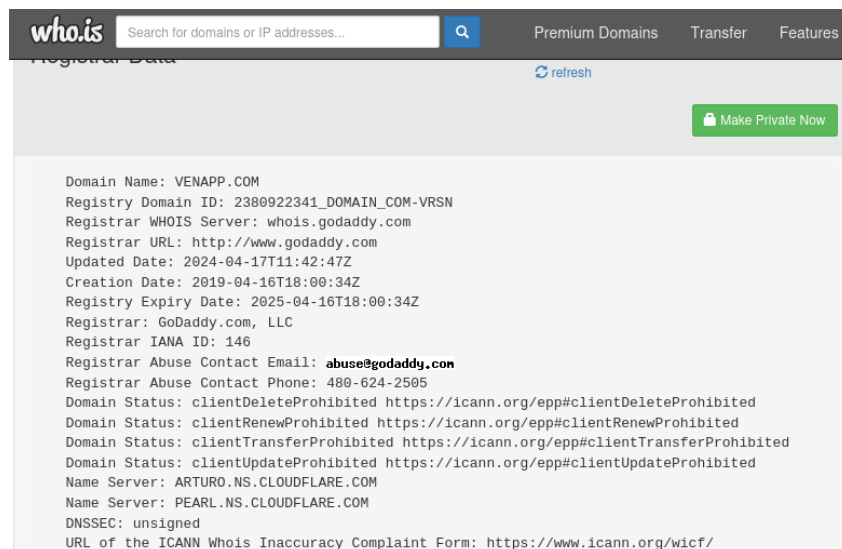

Figure 31 Who.is record

An intermediate tool was used to analyze the HTTP header, and the tool already reports the IP 104.26.6.51, an IP that we will observe in other tools. The server (see Figure 32) is from cloudflare.

Figure 32 Page head data

On one machine, using nslookup, the same address (IPv4) already mentioned was observed, 104.26.6.51 and others, such as 172.67.69.34 and 104.26.7.51.

```
C:\Users\>nslookup venapp.com
Servidor: UnKnown
Address:

Não é resposta autoritativa:
Nome: venapp.com
Addresses: 2606:4700:20::681a:633
           2606:4700:20::681a:733
           2606:4700:20::ac43:4522
           104.26.7.51
           172.67.69.34
           104.26.6.51
```

Figure 33 Venapp.com domain addresses (I'm using windows in the image because that's what we had at the time, based on where I was)

Now the focus is to discover all venapp.com addresses, because within Android the Kotlin application opens this same domain, in fact a subdomain called **https://hub.venapp.com**. The addresses mentioned above are seen in the figures below obtained from address resolution, see that both the hub subdomain and the main domain are hosted on the same server and respond to the same container.

venapp.com. 300	IN TXT	"MS=ms92065130"

The application uses several services from Google and Cloudflare, so a direct attack would be supported by these two major players. In Figure 35, data was extracted from the network, using the BlueStacks application to simulate venapp[21 and 22]. and it is observed that the application opens HTTPS requests on port 443 for IPv4 172.67.69.34.

Figure 35 Network extraction using venapp Android application

The application is simple, it was executed by making HTTP requests and it was possible to register incompletely due to not having documents or a cell phone in Venezuela, but it was possible to locate the Line 58 module and enter the application to obtain the IP address of the requests.

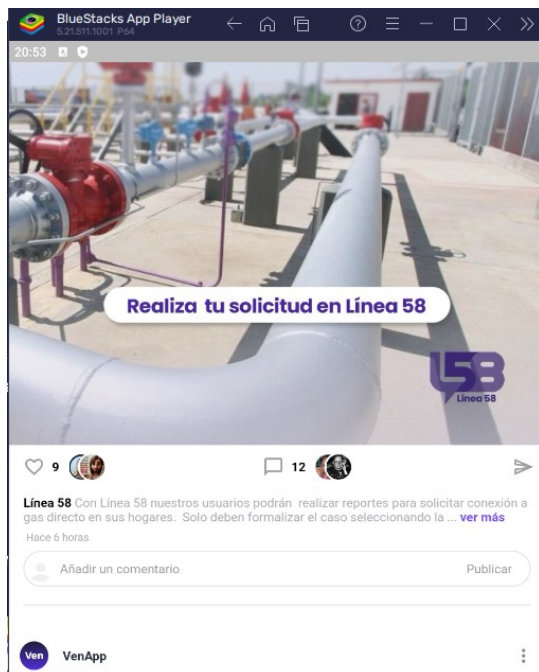

Figure 36 Opening screen

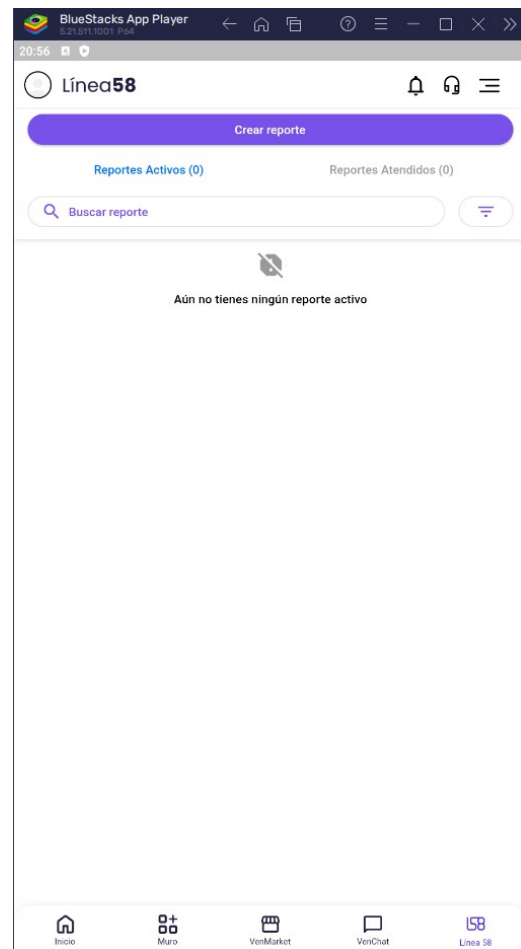

Figure 37 Line 58 Module

Indeed, as mentioned by people, the application extracts information, mainly location.

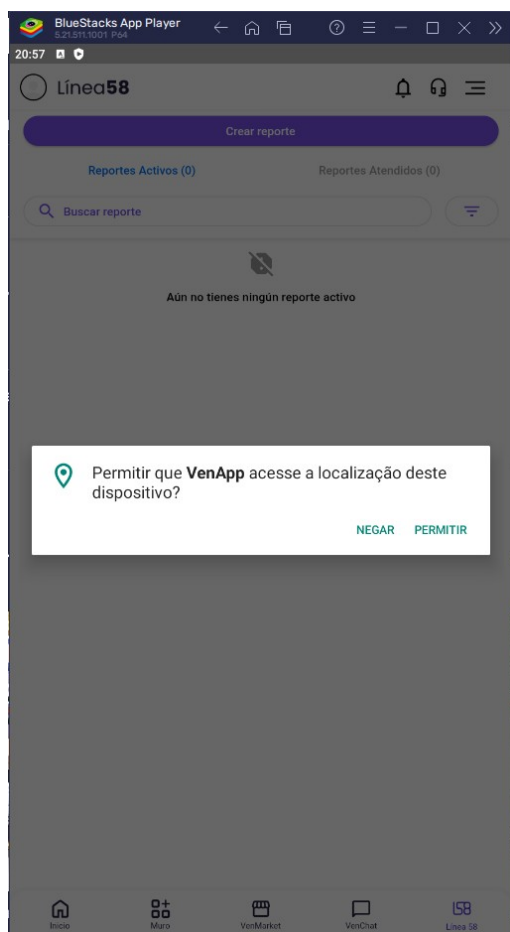

Figure 38 App requests location

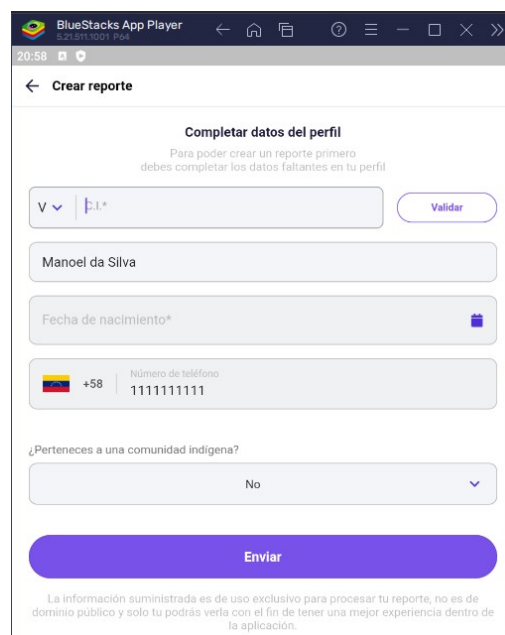

Figure 39 Requires Venezuelan document

It was not possible to continue due to lack of documents and telephone in Venezuela. The request address was obtained.

1.5 People involved

People involved in the company that developed the VenApp application are:

Photo	Paper	Description
-------	-------	-------------

 <p>Nicolas Maduro</p>	<p>Narco-dictator of Venezuela</p>	<p>Supported by communists from Latin America and within a large international corruption scheme, Nicolás Maduro is famous for creating fraudulent elections, followed by repression and murders. It is supported by communist presidents like Lula, Putin, etc. VenApp application contractor</p>
<p>Juan Alberto Alvarez Martinez</p>	<p>President of CCP and President of Brain Pbd Us, Corp</p>	<p>?</p>
 <p>Andre Golabek</p>	<p>Business da Tech and People SRL e VENQIS</p>	<p>Co-founder of VENQIS, a successful Strategic Communication firm based in Panama with offices in DR and Europe. Andre has over 20 years of experience in Investment Banking with comprehensive experience in M & A, Turnaround and Private Equity. Partner of Atarazana Labs.</p>
 <p>Amalia Jianu</p>	<p>Marketing da Tech and People SRL e VENQIS</p>	<p>Romanian entrepreneur & consultant. 10 year professional career working in integrated communications and political marketing. Currently focused on directing political campaigns, developing political leadership, turning around institutions and developing Latin American communities through VENQIS and Atarazana Labs.</p>
 <p>Onil Pereyra</p>	<p>Technology da Tech and People SRL</p>	<p>Co-founded Instacarro.com and co-led it to ~US\$100M in revenue runrate, creating the largest C2B car marketplace in Brazil. SVP at Fuse Machines. Founder and Partner at Atarazana Labs. BS Electrical Engineering, magna cum laude, Master in science in Universite Du Quebec (3.99/4.0 GPA), INTEC MBA, Forbes 30 2017.</p>
 <p>Sharlyn Rodriguez</p>	<p>Sales da Tech and People SRL</p>	<p>Senior level executive with extensive experience in cross-functional international business and significant knowledge in all aspects of account development, management, strategy, product launch management and product placement. Extensive history of winning new business, identifying opportunities and delivering record-setting sales.</p>

Andre Golabek's company is one of the companies that injected money into the political campaign of the CURRENT PRESIDENT OF BOLIVIA, in Brazil it is linked to several scams, such as LiquidaShop, a scheme that harmed thousands of Brazilians, who fled Brazil after the coup. André deserves a specific investigation.

Remember that the current president of Bolivia is one of the supporters of Maduro and the coup.

2 Attack proposal

If an attack is directed at VenApp, the development team will quickly release a new version, this new version can be published at:

- An official venapp.com page;
- Accounts from Nicolás Maduro propagandists;

A DDOS attack must be directed to the IPs of the venapp.com website as the Mobile application also uses the venapp.com domain, in this case it uses hub.venapp.com, such IPs are:

- 104.26.6.51
- 104.26.7.51
- 172.67.69.34

Other IPs of the companies involved are:

- | | | |
|---------------------|----------------|------------------|
| • nolatech.ai | 188.114.96.0 | Cloudflare, Inc. |
| • nolatech.ai | 188.114.97.0 | Cloudflare, Inc. |
| • brainpbd.com | 34.174.234.22 | Google LLC |
| • techandpeople.com | 34.102.136.180 | Google LLC |
